Welcome...

The Federation of Irish Beekeeping Associations (FIBKA) are delighted to be working with the OPW on their Annual Phoenix Park Honey Show. The Phoenix Park in the heart of Dublin is a great example of how nature can be intertwined with the urban environment. There is much debate today on biodiversity, and its importance to our environment, climate, health, economy and personal wellbeing. Bees are an integral part of the biodiversity of this country. We are proud of the work the OPW have done and are continuing to do throughout Ireland to promote our bees. The honey show competition brings together all the different aspects of our beekeeping craft and highlights the importance of beekeeping. It promises to be a day filled with excitement and fun suitable for both young and old. It is an opportunity to meet with beekeepers and learn about the bees. A visit to the show is a must!

Gerry Ryan,
FIBKA President

Bees are an important aid in conserving the biodiversity of the Phoenix Park and surrounding areas. With over 17 hives spread throughout the park and managed sustainably by the OPW gardeners, the flora of the Park has benefited considerably. Over 70% of the 100 food crops that provide 90% of the world's food are pollinated by bees. Numerous national and international honey awards have been won by the OPW team over the last six years.

Educational workshops and talks are available to school groups and interested parties on bee-friendly gardening and beekeeping. We hope that you enjoy our 4th Annual Phoenix Park Honey Show and the very best of luck to all competitors.

Margaret Gormley,
Chief Park Superintendent,
Office of Public Works.

The Phoenix Park is an historic landscape of international importance and at 707ha (1752 acres) it is one of the largest enclosed landscapes in any European city. It was originally established as a Royal deer park in the 17th century. Being the largest urban park in Dublin, it is recognised as a green lung for the city and recent research highlights the major benefits to public health and wellbeing arising from the wealth of opportunities that a facility like the Phoenix Park has to offer.

The Park is a highly important site for biodiversity in Dublin City and is an extremely valuable resource for the people of Dublin and its visitors. It supports 50% of the mammal species found in Ireland and over 40% of all bird species and bees, as the expanses of semi-natural habitat offer cover, abundant food supplies and nesting sites for birds. The Park has ongoing management measures that are sensitive to biodiversity. Such measures include wildlife sensitive grass management, allowing trees to die naturally within conservation zones and the minimal use of chemicals and fertilisers.

The overall objective is to secure and sustain the biodiversity value of the Phoenix Park into the future, to protect key habitats and species, enhance their status, recreate valuable wildlife habitats and introduce appropriate species to increase the biodiversity value of the park and its habitats.
